

The 1,000-Therapy Research Commission

To: Perplexity. From: Claude (engine/merge side) for Sam Russell / AQAL Intelligence. Date: August 22, 2026.

Mission: expand AQAL's mapped protocol library from 92 to 1,000+ REAL, peer-reviewed, line-mapped interventions. Our page machinery turns every verified therapy into citation-backed public pages automatically - so your research output converts directly into hundreds of honest pages per batch. What we will never do is publish a therapy without a resolving DOI behind every claim. That constraint is the product.

Deliverable format - 10 batches of 100

Each batch: one JSON array. Each row:

```
{ "therapy": "Exact Published Name (ACRONYM)",
  "kind": "psychotherapy|mindfulness|skill|somatic|physical|
          relational|community|expressive|psychedelic|
          neuromodulation|lifestyle",
  "mappings": [ {
    "line": "<one of the 32 engine lines - list below>",
    "role": "PRIMARY|SECONDARY|TERTIARY",
    "capacity": "the capacity it develops, one sentence",
    "cite": "Full APA citation, peer-reviewed",
    "doi": "10.xxxx/xxxxx (REQUIRED, must resolve)",
    "finding": "what the study showed - one honest sentence"
  } ] }
```

The 32 engine lines: Logical, Mathematical, Spatial, Linguistic, Volitional, Meta-Cognitive, Intrapersonal, Reflective, Existential, Philosophical, Integrative, Interpersonal, Empathic, Intuitive, Musical, Kinesthetic, Naturalistic, Strategic, Tactical, Adaptive, Resilient, Systematic, Architectural, Adversarial, Interoceptive, Aesthetic, Influence, Humor, Parenting, Seduction, Community-Founding, Financial-Self-Management.

The rules (every row)

- Real, named, published interventions only - it must exist in the literature under this name. No coinages.
- Every mapping has its own citation AND a DOI that resolves. No DOI, no entry - no exceptions.
- Conservative roles: PRIMARY only when the study measured the capacity directly. When unsure, demote.
- Findings stated with effect-size humility. Never 'proves.' Never outcome guarantees.
- Exclusions: supplements without RCTs; pseudo-therapies; anything marketed as diagnosis or cure.
- Check against the current 92 (we will send the list) - variants extend an existing entry, they don't duplicate it.

Where to hunt (suggested batch themes)

- Batch 1-2: established psychotherapies beyond our 92 (ACT full, CFT variants, ERP, IPT-A, CBASP, MERT, ImRs, CRAFT, BATD, PST, MCT/metacognitive therapy, unified protocol...).
- Batch 3: skill-training programs with RCTs (working-memory training debates included - report honestly, including null results; reasoning training; SEL curricula for adults).
- Batch 4: somatic/body protocols (breathwork variants with trials, HRV protocols, sensorimotor).
- Batch 5: relational/group modalities. Batch 6: expressive/arts with meta-analyses.
- Batch 7: physical-exercise protocol variants with cognitive outcomes. Batch 8: contemplative traditions with trial evidence.
- Batch 9: occupational/performance psychology protocols. Batch 10: digital therapeutics with published RCTs.

Our gate - what happens to each batch

Claude machine-verifies every DOI, spot-checks findings against abstracts, rejects rows that fail (logged, sustain-or-concede), merges the rest, and the site's test suite regenerates pages automatically. Accepted batches are announced on AQAL's public Verification page. Expected yield: 300-600 citation-backed pages per verified batch; the ten-batch goal makes AQAL a 4,000-7,000 page evidence library with zero fabricated claims.

- Claude, for Sam Russell / AQAL Intelligence
