

Integration Scorecard

Every page, ten wiring dimensions read from the code, beside value and frequency

Generated 2026-09-18 by `server/integrationScorecard.script.ts`. Wiring is computed; value and frequency are judgements from `shared/pageRatings.ts`. The gap (value – wiring) is the work list.

Summary

Pages	Mean wiring	At 10	Below 5
115	3.3	0	76

System-wide gaps (pages missing each dimension)

Dimension	Weight	Pages missing
Routed	1	0
Engine declared	1	71
Page uses an engine	1	77
In the AI brain	1.5	66
Engine tested	1	67
Genome routes here	1	101
Cross-linked	1	104
On the sphere	0.5	77
Live external data	1	104
Figure trace	1	112

Routers fetching external data: career, erosion, forgiveness, incomeLife, inheritance, integration, ltc, outsideForces, rental, taxSchedule, unasked, zip

The rated pages, by gap

Page	Wiring	Value	Freq	Gap	Missing
Ecological Drivers of Retirement Success /portal/ecological-drivers	1	8	6	7.0	Engine declared, Page uses an engine, In the AI brain, Engine tested, Genome routes here, Cross-linked, On the sphere, Live external data, Figure trace
Short-Term Rental Tax Eliminator /portal/str-tax-eliminator	1	8	3	7.0	Engine declared, Page uses an engine, In the AI brain, Engine tested, Genome routes here, Cross-linked, On the sphere, Live external data, Figure trace

Page	Wiring	Value	Freq	Gap	Missing
The Time Machine / portal/time-machine	1	8	4	7.0	Engine declared, Page uses an engine, In the AI brain, Engine tested, Genome routes here, Cross-linked, On the sphere, Live external data, Figure trace
Business Owner Planning /portal/business-owner	1.5	8	3	6.5	Engine declared, Page uses an engine, In the AI brain, Engine tested, Genome routes here, Cross-linked, Live external data, Figure trace
Estate Tax /portal/estate-tax	1.5	8	3	6.5	Engine declared, Page uses an engine, In the AI brain, Engine tested, Genome routes here, Cross-linked, Live external data, Figure trace
Social Security Optimizer /portal/social-security	1.5	8	8	6.5	Engine declared, Page uses an engine, In the AI brain, Engine tested, Genome routes here, Cross-linked, Live external data, Figure trace
Withdrawal Sequencing /portal/withdrawal-sequencing	1.5	8	6	6.5	Engine declared, Page uses an engine, In the AI brain, Engine tested, Genome routes here, Cross-linked, Live external data, Figure trace
Tax-Free Wealth Combinations /portal/tax-combos	2	8	5	6.0	Engine declared, Page uses an engine, In the AI brain, Engine tested, Genome routes here, On the sphere, Live external data, Figure trace
Carrier Strength /portal/carrier-ratings	1	7	4	6.0	Engine declared, Page uses an engine, In the AI brain, Engine tested, Genome routes here, Cross-linked, On the sphere, Live external data, Figure trace

Page	Wiring	Value	Freq	Gap	Missing
Estate Planning /portal/estate-planning	1	7	6	6.0	Engine declared, Page uses an engine, In the AI brain, Engine tested, Genome routes here, Cross-linked, On the sphere, Live external data, Figure trace
Medicare IRMAA Planner /portal/medicare-irmaa	1.5	7	6	5.5	Engine declared, Page uses an engine, In the AI brain, Engine tested, Genome routes here, Cross-linked, Live external data, Figure trace
Oil & Gas Deductions /portal/oil-gas	2	7	2	5.0	Engine declared, Page uses an engine, In the AI brain, Engine tested, Cross-linked, On the sphere, Live external data, Figure trace
Outside Forces /portal/outside-forces	3.5	8	5	4.5	Page uses an engine, In the AI brain, Engine tested, Genome routes here, Cross-linked, Figure trace
House Recycling /portal/house-recycling	2.5	7	3	4.5	Engine declared, Page uses an engine, In the AI brain, Engine tested, Cross-linked, Live external data, Figure trace
The Decade Machine /ultra-calculator	5	9	7	4.0	In the AI brain, Genome routes here, On the sphere, Live external data, Figure trace
The Fact Finder /portal/financial-assessment	5.5	9	9	3.5	In the AI brain, Genome routes here, Live external data, Figure trace
What the Genome Says to Do /portal/genome-strategies	5.5	9	7	3.5	Genome routes here, Cross-linked, On the sphere, Live external data, Figure trace
The Sequence Planner /portal/sequence-planner	5.5	9	4	3.5	Genome routes here, Cross-linked, On the sphere, Live external data, Figure trace
The AI Brain Hub /portal/ai-brain-hub	4.5	8	3	3.5	Page uses an engine, Genome routes here, Cross-linked, On the sphere, Live external data, Figure trace

Page	Wiring	Value	Freq	Gap	Missing
The Career Ledger /portal/career-path	4.5	8	4	3.5	Page uses an engine, Genome routes here, Cross-linked, On the sphere, Live external data, Figure trace
Forgiveness Engine /portal/forgiveness	4.5	8	3	3.5	Page uses an engine, In the AI brain, Genome routes here, Cross-linked, Figure trace
The Inheritance Engine /portal/inheritance	4.5	8	5	3.5	Page uses an engine, In the AI brain, Genome routes here, Cross-linked, Figure trace
IUL vs Roth /portal/iul-vs-roth	4.5	8	5	3.5	Engine declared, Engine tested, Cross-linked, On the sphere, Live external data, Figure trace
Real Estate Mogul /portal/real-estate-mogul	4.5	8	3	3.5	Engine declared, Engine tested, Cross-linked, On the sphere, Live external data, Figure trace
Policy Loan Modeller /portal/policy-loans	3.5	7	2	3.5	Engine declared, Engine tested, Genome routes here, Cross-linked, On the sphere, Live external data, Figure trace
Tax-Free Income for Life /portal/income-for-life	6	9	5	3.0	Page uses an engine, Genome routes here, Cross-linked, Figure trace
Long-Term Care Planner /portal/long-term-care	6	9	6	3.0	Page uses an engine, Genome routes here, Cross-linked, Figure trace
The Wealth Genome /portal/wealth-genome	6	9	8	3.0	Page uses an engine, Cross-linked, Live external data, Figure trace
IUL Engine /portal/iul-engine	5	8	4	3.0	Page uses an engine, Genome routes here, Cross-linked, Live external data, Figure trace

Page	Wiring	Value	Freq	Gap	Missing
Policy Cost Lab /portal/policy-cost-lab	5	8	3	3.0	Page uses an engine, Genome routes here, Cross-linked, Live external data, Figure trace
Index Strategy Comparison /portal/index-strategies	4	7	3	3.0	Page uses an engine, In the AI brain, Genome routes here, Cross-linked, On the sphere, Live external data
QBI / Section 199A Optimizer /portal/qbi-optimizer	6.5	9	4	2.5	Genome routes here, Cross-linked, On the sphere, Live external data
Wealth Genome Pairing Protocol /portal/household-genome	5.5	8	5	2.5	Genome routes here, Cross-linked, On the sphere, Live external data, Figure trace
Infinite Banking /portal/infinite-banking	5.5	8	3	2.5	Genome routes here, Cross-linked, On the sphere, Live external data, Figure trace
The Thresholds /portal/thresholds	5.5	8	3	2.5	Genome routes here, Cross-linked, On the sphere, Live external data, Figure trace
MYGA Fixed Rates /portal/myga-fixed-rate	4.5	7	5	2.5	Engine declared, Genome routes here, Cross-linked, On the sphere, Live external data, Figure trace
The Erosion Engine /portal/erosion	7	9	7	2.0	Page uses an engine, Cross-linked, Figure trace
Roth Conversion Ladder /portal/roth-conversion	7	9	6	2.0	Engine declared, Live external data, Figure trace
Tax Waterfall /portal/tax-waterfall	6	8	8	2.0	Genome routes here, Cross-linked, Live external data, Figure trace
Fixed Indexed Annuity Top Ten /portal/fia-top10	5	7	4	2.0	Engine declared, Genome routes here, Cross-linked, Live external data, Figure trace
Household Wealth /portal/household-wealth	5	7	6	2.0	Engine declared, Genome routes here, Cross-linked, Live external data, Figure trace

Page	Wiring	Value	Freq	Gap	Missing
Alternative Lines of Credit for Rental Properties /portal/alt-credit	6.5	8	3	1.5	Cross-linked, On the sphere, Live external data, Figure trace
How a Figure Gets Made /portal/how-a-figure-is-made	6.5	8	4	1.5	Cross-linked, On the sphere, Live external data, Figure trace
Lifetime Guaranteed Income /portal/lifetime-income	6.5	8	5	1.5	Cross-linked, On the sphere, Live external data, Figure trace
The Five Mechanisms /portal/mechanisms	6.5	8	5	1.5	Genome routes here, On the sphere, Live external data, Figure trace
Liquidity Without the Bank /portal/liquidity-routes	5.5	7	3	1.5	Genome routes here, Cross-linked, On the sphere, Live external data, Figure trace
Retirement Income Projection /portal/retirement-projection	5.5	7	8	1.5	Genome routes here, Cross-linked, On the sphere, Live external data, Figure trace
The Zip Engine /portal/zip-engine	8	9	5	1.0	Genome routes here, Figure trace
Mortgage Killer /portal/mortgage-killer	7.5	8	7	0.5	On the sphere, Live external data, Figure trace
The Mortgage Ledger /portal/mortgage-ledger	8.5	8	6	-0.5	On the sphere, Live external data
Rental Enterprise /portal/rental-enterprise	9	8	3	-1.0	Figure trace
Short-Term Rentals /portal/short-term-rentals	8	7	3	-1.0	Cross-linked, Figure trace

Page by page

Ecological Drivers of Retirement Success — /portal/ecological-drivers

Wiring 1/10 · Value 8/10 · Frequency 6/10

Right page when: Households who want to know what actually predicts retirement outcomes before they optimise a rate.

To reach ten — from the code:

- Name the engine in shared/calculatorCatalog.ts (engine: "shared/....ts") so provenance and the brain can cite it.
- client/src/pages/portal/EcologicalDrivers.tsx imports no shared engine — the page's figures are not reproducible outside it. Move the arithmetic to shared/ and import it.
- Add its engine to a group in shared/aiMemoryBank.ts so the twelve channels can use it.
- No server/*.test.ts imports the engine. Add one that reproduces a figure the page shows.

- No strategy in `shared/genomeStrategies.ts` names `/portal/ecological-drivers` in `relatedPaths` — the predictive layer cannot route a household here.
- Only 1 other surface link to `/portal/ecological-drivers`. Add it where a reader would need it next (a related page's footer, the relevant dossier, the planner).
- Place `/portal/ecological-drivers` on the sphere in `shared/sphere.ts`.
- Calls `trpc.clients` (`server/clients.ts`) but that router fetches no external data source. Wire a sourced series (FRED, BLS, FHFA, Zillow) into it, or state on the page that the figures are static.
- No `FigureTrace` in `shared/provenance.ts` covers `/portal/ecological-drivers`. Add one so a client can see how its headline figure is made.

Connections that would take it to ten — by judgement:

- Genome: link from the durability factors.
- Sources: DOIs already verified; expose them on the page.

Short-Term Rental Tax Eliminator — `/portal/str-tax-eliminator`

Wiring 1/10 · Value 8/10 · Frequency 3/10

Right page when: Owns or will buy a short-term rental and can meet material participation.

To reach ten — from the code:

- Name the engine in `shared/calculatorCatalog.ts` (engine: `"shared/....ts"`) so provenance and the brain can cite it.
- `client/src/pages/STRTaxEliminatorPage.tsx` imports no shared engine — the page's figures are not reproducible outside it. Move the arithmetic to `shared/` and import it.
- Add its engine to a group in `shared/aiMemoryBank.ts` so the twelve channels can use it.
- No `server/*.test.ts` imports the engine. Add one that reproduces a figure the page shows.
- No strategy in `shared/genomeStrategies.ts` names `/portal/str-tax-eliminator` in `relatedPaths` — the predictive layer cannot route a household here.
- Only 0 other surfaces link to `/portal/str-tax-eliminator`. Add it where a reader would need it next (a related page's footer, the relevant dossier, the planner).
- Place `/portal/str-tax-eliminator` on the sphere in `shared/sphere.ts`.
- No `tRPC` call from `client/src/pages/STRTaxEliminatorPage.tsx` — every figure is client-side and cannot be refreshed from a source. Add a router under `server/` that supplies dated inputs.
- No `FigureTrace` in `shared/provenance.ts` covers `/portal/str-tax-eliminator`. Add one so a client can see how its headline figure is made.

Connections that would take it to ten — by judgement:

- STR engine: hand the revenue model across.
- Zip: pull nightly rates by zip.
- Engine: name `strEngine` here too.

The Time Machine — `/portal/time-machine`

Wiring 1/10 · Value 8/10 · Frequency 4/10

Right page when: Any indexed-product decision; what the last thirty years would have paid.

To reach ten — from the code:

- Name the engine in `shared/calculatorCatalog.ts` (engine: `"shared/....ts"`) so provenance and the brain can cite it.
- `client/src/pages/portal/TimeMachine.tsx` imports no shared engine — the page's figures are not reproducible outside it. Move the arithmetic to `shared/` and import it.
- Add its engine to a group in `shared/aiMemoryBank.ts` so the twelve channels can use it.
- No `server/*.test.ts` imports the engine. Add one that reproduces a figure the page shows.

- No strategy in shared/genomeStrategies.ts names /portal/time-machine in relatedPaths — the predictive layer cannot route a household here.
- Only 0 other surfaces link to /portal/time-machine. Add it where a reader would need it next (a related page's footer, the relevant dossier, the planner).
- Place /portal/time-machine on the sphere in shared/sphere.ts.
- Calls trpc.clients (server/clients.ts) but that router fetches no external data source. Wire a sourced series (FRED, BLS, FHFA, Zillow) into it, or state on the page that the figures are static.
- No FigureTrace in shared/provenance.ts covers /portal/time-machine. Add one so a client can see how its headline figure is made.

Connections that would take it to ten — by judgement:

- Engine: name timeMachineEngine.ts; it has a test but the catalogue does not name it.
- IUL engine: link both ways.

Business Owner Planning — /portal/business-owner

Wiring 1.5/10 · Value 8/10 · Frequency 3/10

Right page when: Owns a business with income over \$150k.

To reach ten — from the code:

- Name the engine in shared/calculatorCatalog.ts (engine: "shared/....ts") so provenance and the brain can cite it.
- client/src/pages/portal/BusinessOwnerPlanning.tsx imports no shared engine — the page's figures are not reproducible outside it. Move the arithmetic to shared/ and import it.
- Add its engine to a group in shared/aiMemoryBank.ts so the twelve channels can use it.
- No server/*.test.ts imports the engine. Add one that reproduces a figure the page shows.
- No strategy in shared/genomeStrategies.ts names /portal/business-owner in relatedPaths — the predictive layer cannot route a household here.
- Only 0 other surfaces link to /portal/business-owner. Add it where a reader would need it next (a related page's footer, the relevant dossier, the planner).
- Calls trpc.clients (server/clients.ts) but that router fetches no external data source. Wire a sourced series (FRED, BLS, FHFA, Zillow) into it, or state on the page that the figures are static.
- No FigureTrace in shared/provenance.ts covers /portal/business-owner. Add one so a client can see how its headline figure is made.

Connections that would take it to ten — by judgement:

- QBI: link both ways.
- Career ledger: hand the practice figures across.
- Genome: link from the business strategies.

Estate Tax — /portal/estate-tax

Wiring 1.5/10 · Value 8/10 · Frequency 3/10

Right page when: Estate over the exemption, or a state with its own.

To reach ten — from the code:

- Name the engine in shared/calculatorCatalog.ts (engine: "shared/....ts") so provenance and the brain can cite it.
- client/src/pages/portal/EstateTax.tsx imports no shared engine — the page's figures are not reproducible outside it. Move the arithmetic to shared/ and import it.
- Add its engine to a group in shared/aiMemoryBank.ts so the twelve channels can use it.
- No server/*.test.ts imports the engine. Add one that reproduces a figure the page shows.

- No strategy in `shared/genomeStrategies.ts` names `/portal/estate-tax` in `relatedPaths` — the predictive layer cannot route a household here.
- Only 0 other surfaces link to `/portal/estate-tax`. Add it where a reader would need it next (a related page's footer, the relevant dossier, the planner).
- Calls `trpc.estateTax` (`server/estateTax.ts`) but that router fetches no external data source. Wire a sourced series (FRED, BLS, FHFA, Zillow) into it, or state on the page that the figures are static.
- No `FigureTrace` in `shared/provenance.ts` covers `/portal/estate-tax`. Add one so a client can see how its headline figure is made.

Connections that would take it to ten — by judgement:

- Live: exemption inflation adjustment annually.
- Test: `estateTaxEngine.ts` has none.

Social Security Optimizer — `/portal/social-security`

Wiring 1.5/10 · Value 8/10 · Frequency 8/10

Right page when: Fifty-five and older, or younger with a spouse who is.

To reach ten — from the code:

- Name the engine in `shared/calculatorCatalog.ts` (engine: `"shared/...ts"`) so provenance and the brain can cite it.
- `client/src/pages/portal/SocialSecurityOptimizer.tsx` imports no shared engine — the page's figures are not reproducible outside it. Move the arithmetic to `shared/` and import it.
- Add its engine to a group in `shared/aiMemoryBank.ts` so the twelve channels can use it.
- No `server/*.test.ts` imports the engine. Add one that reproduces a figure the page shows.
- No strategy in `shared/genomeStrategies.ts` names `/portal/social-security` in `relatedPaths` — the predictive layer cannot route a household here.
- Only 0 other surfaces link to `/portal/social-security`. Add it where a reader would need it next (a related page's footer, the relevant dossier, the planner).
- No `tRPC` call from `client/src/pages/portal/SocialSecurityOptimizer.tsx` — every figure is client-side and cannot be refreshed from a source. Add a router under `server/` that supplies dated inputs.
- No `FigureTrace` in `shared/provenance.ts` covers `/portal/social-security`. Add one so a client can see how its headline figure is made.

Connections that would take it to ten — by judgement:

- Engine: move the claiming arithmetic to `shared/` and name it.
- Live: SSA COLA and bend points on a sweep.
- Genome: link from the guaranteed-income strategies.

Withdrawal Sequencing — `/portal/withdrawal-sequencing`

Wiring 1.5/10 · Value 8/10 · Frequency 6/10

Right page when: Any household with more than one account type at retirement.

To reach ten — from the code:

- Name the engine in `shared/calculatorCatalog.ts` (engine: `"shared/...ts"`) so provenance and the brain can cite it.
- `client/src/pages/portal/WithdrawalSequencing.tsx` imports no shared engine — the page's figures are not reproducible outside it. Move the arithmetic to `shared/` and import it.
- Add its engine to a group in `shared/aiMemoryBank.ts` so the twelve channels can use it.
- No `server/*.test.ts` imports the engine. Add one that reproduces a figure the page shows.
- No strategy in `shared/genomeStrategies.ts` names `/portal/withdrawal-sequencing` in `relatedPaths` — the predictive layer cannot route a household here.

- Only 0 other surfaces link to `/portal/withdrawal-sequencing`. Add it where a reader would need it next (a related page's footer, the relevant dossier, the planner).
- Calls `trpc.clients` (`server/clients.ts`) but that router fetches no external data source. Wire a sourced series (FRED, BLS, FHFA, Zillow) into it, or state on the page that the figures are static.
- No `FigureTrace` in `shared/provenance.ts` covers `/portal/withdrawal-sequencing`. Add one so a client can see how its headline figure is made.

Connections that would take it to ten — by judgement:

- Engine: name one; the page's arithmetic is inline.
- Erosion: feed the trajectory's tax odds into the sequencing.
- Provenance: trace the tax-saved figure.

Tax-Free Wealth Combinations — </portal/tax-combos>

Wiring 2/10 · Value 8/10 · Frequency 5/10

Right page when: Households ready to stack two or more strategies.

To reach ten — from the code:

- Name the engine in `shared/calculatorCatalog.ts` (engine: `"shared/....ts"`) so provenance and the brain can cite it.
- `client/src/pages/portal/TaxFreeWealthCombos.tsx` imports no shared engine — the page's figures are not reproducible outside it. Move the arithmetic to `shared/` and import it.
- Add its engine to a group in `shared/aiMemoryBank.ts` so the twelve channels can use it.
- No `server/*.test.ts` imports the engine. Add one that reproduces a figure the page shows.
- No strategy in `shared/genomeStrategies.ts` names `/portal/tax-combos` in `relatedPaths` — the predictive layer cannot route a household here.
- Place `/portal/tax-combos` on the sphere in `shared/sphere.ts`.
- No `tRPC` call from `client/src/pages/portal/TaxFreeWealthCombos.tsx` — every figure is client-side and cannot be refreshed from a source. Add a router under `server/` that supplies dated inputs.
- No `FigureTrace` in `shared/provenance.ts` covers `/portal/tax-combos`. Add one so a client can see how its headline figure is made.

Connections that would take it to ten — by judgement:

- Engine: name one.
- Genome: strategy-fit should rank the combos.
- Planner: combos are sequences; route through it.

Carrier Strength — </portal/carrier-ratings>

Wiring 1/10 · Value 7/10 · Frequency 4/10

Right page when: Any purchase of a permanent policy or annuity.

To reach ten — from the code:

- Name the engine in `shared/calculatorCatalog.ts` (engine: `"shared/....ts"`) so provenance and the brain can cite it.
- `client/src/pages/portal/CarrierRatings.tsx` imports no shared engine — the page's figures are not reproducible outside it. Move the arithmetic to `shared/` and import it.
- Add its engine to a group in `shared/aiMemoryBank.ts` so the twelve channels can use it.
- No `server/*.test.ts` imports the engine. Add one that reproduces a figure the page shows.
- No strategy in `shared/genomeStrategies.ts` names `/portal/carrier-ratings` in `relatedPaths` — the predictive layer cannot route a household here.
- Only 0 other surfaces link to `/portal/carrier-ratings`. Add it where a reader would need it next (a related page's footer, the relevant dossier, the planner).

- Place `/portal/carrier-ratings` on the sphere in `shared/sphere.ts`.
- Calls `trpc.carrierRatings` (`server/carrierRatings.ts`) but that router fetches no external data source. Wire a sourced series (FRED, BLS, FHFA, Zillow) into it, or state on the page that the figures are static.
- No `FigureTrace` in `shared/provenance.ts` covers `/portal/carrier-ratings`. Add one so a client can see how its headline figure is made.

Connections that would take it to ten — by judgement:

- Live: A.M. Best and S&P on a sweep with dates.
- Engine: `carrierRatings.ts` exists and is untested.

Estate Planning — `/portal/estate-planning`

Wiring 1/10 · Value 7/10 · Frequency 6/10

Right page when: Any household with dependants or property.

To reach ten — from the code:

- Name the engine in `shared/calculatorCatalog.ts` (engine: `"shared/....ts"`) so provenance and the brain can cite it.
- `client/src/pages/EstatePlanningPage.tsx` imports no shared engine — the page's figures are not reproducible outside it. Move the arithmetic to `shared/` and import it.
- Add its engine to a group in `shared/aiMemoryBank.ts` so the twelve channels can use it.
- No `server/*.test.ts` imports the engine. Add one that reproduces a figure the page shows.
- No strategy in `shared/genomeStrategies.ts` names `/portal/estate-planning` in `relatedPaths` — the predictive layer cannot route a household here.
- Only 0 other surfaces link to `/portal/estate-planning`. Add it where a reader would need it next (a related page's footer, the relevant dossier, the planner).
- Place `/portal/estate-planning` on the sphere in `shared/sphere.ts`.
- No `tRPC` call from `client/src/pages/EstatePlanningPage.tsx` — every figure is client-side and cannot be refreshed from a source. Add a router under `server/` that supplies dated inputs.
- No `FigureTrace` in `shared/provenance.ts` covers `/portal/estate-planning`. Add one so a client can see how its headline figure is made.

Connections that would take it to ten — by judgement:

- Engine: name one.
- Trusts: link both ways.
- Brain: no group carries estate planning rules beyond the tax engine.

Medicare IRMAA Planner — `/portal/medicare-irmaa`

Wiring 1.5/10 · Value 7/10 · Frequency 6/10

Right page when: Sixty-three and older with income near a bracket edge.

To reach ten — from the code:

- Name the engine in `shared/calculatorCatalog.ts` (engine: `"shared/....ts"`) so provenance and the brain can cite it.
- `client/src/pages/portal/MedicareIRMAA.tsx` imports no shared engine — the page's figures are not reproducible outside it. Move the arithmetic to `shared/` and import it.
- Add its engine to a group in `shared/aiMemoryBank.ts` so the twelve channels can use it.
- No `server/*.test.ts` imports the engine. Add one that reproduces a figure the page shows.
- No strategy in `shared/genomeStrategies.ts` names `/portal/medicare-irmaa` in `relatedPaths` — the predictive layer cannot route a household here.
- Only 0 other surfaces link to `/portal/medicare-irmaa`. Add it where a reader would need it next (a related page's footer, the relevant dossier, the planner).

- Calls `trpc.clients` (`server/clients.ts`) but that router fetches no external data source. Wire a sourced series (FRED, BLS, FHFA, Zillow) into it, or state on the page that the figures are static.
- No `FigureTrace` in `shared/provenance.ts` covers `/portal/medicare-irmaa`. Add one so a client can see how its headline figure is made.

Connections that would take it to ten — by judgement:

- Live: CMS IRMAA thresholds annually.
- Roth: link both ways with the conversion ladder.
- Engine: name it.

Oil & Gas Deductions — </portal/oil-gas>

Wiring 2/10 · Value 7/10 · Frequency 2/10

Right page when: W-2 over \$300k with a large current-year liability and real appetite for illiquidity.

To reach ten — from the code:

- Name the engine in `shared/calculatorCatalog.ts` (engine: `"shared/....ts"`) so provenance and the brain can cite it.
- `client/src/pages/OilGasPage.tsx` imports no shared engine — the page's figures are not reproducible outside it. Move the arithmetic to `shared/` and import it.
- Add its engine to a group in `shared/aiMemoryBank.ts` so the twelve channels can use it.
- No `server/*.test.ts` imports the engine. Add one that reproduces a figure the page shows.
- Only 0 other surfaces link to `/portal/oil-gas`. Add it where a reader would need it next (a related page's footer, the relevant dossier, the planner).
- Place `/portal/oil-gas` on the sphere in `shared/sphere.ts`.
- No `tRPC` call from `client/src/pages/OilGasPage.tsx` — every figure is client-side and cannot be refreshed from a source. Add a router under `server/` that supplies dated inputs.
- No `FigureTrace` in `shared/provenance.ts` covers `/portal/oil-gas`. Add one so a client can see how its headline figure is made.

Connections that would take it to ten — by judgement:

- Engine: name one.
- Brain: no group carries the IDC rule.
- Provenance: trace the year-one deduction.

Outside Forces — </portal/outside-forces>

Wiring 3.5/10 · Value 8/10 · Frequency 5/10

Right page when: Anyone who wants the macro inputs behind every projection, with sources.

To reach ten — from the code:

- `client/src/pages/portal/OutsideForces.tsx` imports no shared engine — the page's figures are not reproducible outside it. Move the arithmetic to `shared/` and import it.
- Add `server/outsideForces.ts` to a group in `shared/aiMemoryBank.ts` so the twelve channels can use it.
- No `server/*.test.ts` imports `server/outsideForces.ts`. Add one that reproduces a figure the page shows.
- No strategy in `shared/genomeStrategies.ts` names `/portal/outside-forces` in `relatedPaths` — the predictive layer cannot route a household here.
- Only 0 other surfaces link to `/portal/outside-forces`. Add it where a reader would need it next (a related page's footer, the relevant dossier, the planner).
- No `FigureTrace` in `shared/provenance.ts` covers `/portal/outside-forces`. Add one so a client can see how its headline figure is made.

Connections that would take it to ten — by judgement:

- Planner: appreciation and rate inputs should default from here.
- Provenance: each series is a sourced step; expose as traces.

House Recycling — </portal/house-recycling>

Wiring 2.5/10 · Value 7/10 · Frequency 3/10

Right page when: Owns a home with equity and wants a second without a second down payment.

To reach ten — from the code:

- Name the engine in shared/calculatorCatalog.ts (engine: "shared/....ts") so provenance and the brain can cite it.
- client/src/pages/portal/HouseRecyclingStrategy.tsx imports no shared engine — the page's figures are not reproducible outside it. Move the arithmetic to shared/ and import it.
- Add its engine to a group in shared/aiMemoryBank.ts so the twelve channels can use it.
- No server/*.test.ts imports the engine. Add one that reproduces a figure the page shows.
- Only 1 other surface link to /portal/house-recycling. Add it where a reader would need it next (a related page's footer, the relevant dossier, the planner).
- Calls trpc.clients (server/clients.ts) but that router fetches no external data source. Wire a sourced series (FRED, BLS, FHFA, Zillow) into it, or state on the page that the figures are static.
- No FigureTrace in shared/provenance.ts covers /portal/house-recycling. Add one so a client can see how its headline figure is made.

Connections that would take it to ten — by judgement:

- Mechanism: this is BRRRR on the primary; cross-link the dossier.
- Engine: name one.

The Decade Machine — </ultra-calculator>

Wiring 5/10 · Value 9/10 · Frequency 7/10

Right page when: Any household with a decade to plan and a tax return to start from.

To reach ten — from the code:

- Add shared/ultraEngine.ts to a group in shared/aiMemoryBank.ts so the twelve channels can use it.
- No strategy in shared/genomeStrategies.ts names /ultra-calculator in relatedPaths — the predictive layer cannot route a household here.
- Place /ultra-calculator on the sphere in shared/sphere.ts.
- Calls trpc.ultra (server/ultraAI.ts) but that router fetches no external data source. Wire a sourced series (FRED, BLS, FHFA, Zillow) into it, or state on the page that the figures are static.
- No FigureTrace in shared/provenance.ts covers /ultra-calculator. Add one so a client can see how its headline figure is made.

Connections that would take it to ten — by judgement:

- Genome: name it in the accumulation strategies' relatedPaths.
- Provenance: a FigureTrace for the decade headline.
- Live: FRED CPI for the real-dollar line.

The Fact Finder — </portal/financial-assessment>

Wiring 5.5/10 · Value 9/10 · Frequency 9/10

Right page when: Everyone, first — before any strategy page is worth reading.

To reach ten — from the code:

- Add shared/clientFactFinder.ts to a group in shared/aiMemoryBank.ts so the twelve channels can use it.

- No strategy in shared/genomeStrategies.ts names /portal/financial-assessment in relatedPaths — the predictive layer cannot route a household here.
- Calls trpc.factFinder (server/factFinderRouter.ts) but that router fetches no external data source. Wire a sourced series (FRED, BLS, FHFA, Zillow) into it, or state on the page that the figures are static.
- No FigureTrace in shared/provenance.ts covers /portal/financial-assessment. Add one so a client can see how its headline figure is made.

Connections that would take it to ten — by judgement:

- Planner: the fact finder should emit a Situation.
- Genome: link on completion.

What the Genome Says to Do — </portal/genome-strategies>

Wiring 5.5/10 · Value 9/10 · Frequency 7/10

Right page when: After the genome; the page that says what to do.

To reach ten — from the code:

- No strategy in shared/genomeStrategies.ts names /portal/genome-strategies in relatedPaths — the predictive layer cannot route a household here.
- Only 1 other surface link to /portal/genome-strategies. Add it where a reader would need it next (a related page's footer, the relevant dossier, the planner).
- Place /portal/genome-strategies on the sphere in shared/sphere.ts.
- No tRPC call from client/src/pages/portal/GenomeStrategies.tsx — every figure is client-side and cannot be refreshed from a source. Add a router under server/ that supplies dated inputs.
- No FigureTrace in shared/provenance.ts covers /portal/genome-strategies. Add one so a client can see how its headline figure is made.

Connections that would take it to ten — by judgement:

- Planner: each fit strategy should open a pre-filled planner situation.
- Mechanisms: link each property strategy to its dossier.

The Sequence Planner — </portal/sequence-planner>

Wiring 5.5/10 · Value 9/10 · Frequency 4/10

Right page when: Any portfolio owner, or a first-time household with a goal.

To reach ten — from the code:

- No strategy in shared/genomeStrategies.ts names /portal/sequence-planner in relatedPaths — the predictive layer cannot route a household here.
- Only 1 other surface link to /portal/sequence-planner. Add it where a reader would need it next (a related page's footer, the relevant dossier, the planner).
- Place /portal/sequence-planner on the sphere in shared/sphere.ts.
- No tRPC call from client/src/pages/portal/SequencePlanner.tsx — every figure is client-side and cannot be refreshed from a source. Add a router under server/ that supplies dated inputs.
- No FigureTrace in shared/provenance.ts covers /portal/sequence-planner. Add one so a client can see how its headline figure is made.

Connections that would take it to ten — by judgement:

- Genome: seed the situation from the genome and the fact finder.
- Zip: default appreciation from the zip series.
- Providers: name the lender whose threshold each stage used.

The AI Brain Hub — </portal/ai-brain-hub>

Wiring 4.5/10 · Value 8/10 · Frequency 3/10

Right page when: Advisors and the owner; what the channels know.

To reach ten — from the code:

- client/src/pages/AIBrainHubPage.tsx imports no shared engine — the page's figures are not reproducible outside it. Move the arithmetic to shared/ and import it.
- No strategy in shared/genomeStrategies.ts names /portal/ai-brain-hub in relatedPaths — the predictive layer cannot route a household here.
- Only 0 other surfaces link to /portal/ai-brain-hub. Add it where a reader would need it next (a related page's footer, the relevant dossier, the planner).
- Place /portal/ai-brain-hub on the sphere in shared/sphere.ts.
- No tRPC call from client/src/pages/AIBrainHubPage.tsx — every figure is client-side and cannot be refreshed from a source. Add a router under server/ that supplies dated inputs.
- No FigureTrace in shared/provenance.ts covers /portal/ai-brain-hub. Add one so a client can see how its headline figure is made.

Connections that would take it to ten — by judgement:

- Integration scorecard: link both ways; the hub should show unwired groups.

The Career Ledger — </portal/career-path>

Wiring 4.5/10 · Value 8/10 · Frequency 4/10

Right page when: Choosing or changing a professional path; physicians, dentists, vets, lawyers.

To reach ten — from the code:

- client/src/pages/CareerPathPage.tsx imports no shared engine — the page's figures are not reproducible outside it. Move the arithmetic to shared/ and import it.
- No strategy in shared/genomeStrategies.ts names /portal/career-path in relatedPaths — the predictive layer cannot route a household here.
- Only 0 other surfaces link to /portal/career-path. Add it where a reader would need it next (a related page's footer, the relevant dossier, the planner).
- Place /portal/career-path on the sphere in shared/sphere.ts.
- No tRPC call from client/src/pages/CareerPathPage.tsx — every figure is client-side and cannot be refreshed from a source. Add a router under server/ that supplies dated inputs.
- No FigureTrace in shared/provenance.ts covers /portal/career-path. Add one so a client can see how its headline figure is made.

Connections that would take it to ten — by judgement:

- Forgiveness: hand the loan balance across.
- Genome: link from the career factor.

Forgiveness Engine — </portal/forgiveness>

Wiring 4.5/10 · Value 8/10 · Frequency 3/10

Right page when: Federal student debt over \$50k, or a household with a physician or public-service worker.

To reach ten — from the code:

- client/src/pages/portal/Forgiveness.tsx imports no shared engine — the page's figures are not reproducible outside it. Move the arithmetic to shared/ and import it.
- Add shared/forgiveness.ts to a group in shared/aiMemoryBank.ts so the twelve channels can use it.

- No strategy in shared/genomeStrategies.ts names /portal/forgiveness in relatedPaths — the predictive layer cannot route a household here.
- Only 0 other surfaces link to /portal/forgiveness. Add it where a reader would need it next (a related page's footer, the relevant dossier, the planner).
- No FigureTrace in shared/provenance.ts covers /portal/forgiveness. Add one so a client can see how its headline figure is made.

Connections that would take it to ten — by judgement:

- Career ledger: hand the loan balance across.
- Live: studentaid.gov rule changes.

The Inheritance Engine — /portal/inheritance

Wiring 4.5/10 · Value 8/10 · Frequency 5/10

Right page when: Expecting or planning an inheritance.

To reach ten — from the code:

- client/src/pages/portal/Inheritance.tsx imports no shared engine — the page's figures are not reproducible outside it. Move the arithmetic to shared/ and import it.
- Add shared/inheritanceEngine.ts to a group in shared/aiMemoryBank.ts so the twelve channels can use it.
- No strategy in shared/genomeStrategies.ts names /portal/inheritance in relatedPaths — the predictive layer cannot route a household here.
- Only 0 other surfaces link to /portal/inheritance. Add it where a reader would need it next (a related page's footer, the relevant dossier, the planner).
- No FigureTrace in shared/provenance.ts covers /portal/inheritance. Add one so a client can see how its headline figure is made.

Connections that would take it to ten — by judgement:

- Erosion: already fed; expose the tax-odds source on the page.
- Household genome: step-family factors.

IUL vs Roth — /portal/iul-vs-roth

Wiring 4.5/10 · Value 8/10 · Frequency 5/10

Right page when: Already maxing a Roth, or ineligible for one.

To reach ten — from the code:

- Name the engine in shared/calculatorCatalog.ts (engine: "shared/....ts") so provenance and the brain can cite it.
- No server/*.test.ts imports shared/ibbotsonModel.ts. Add one that reproduces a figure the page shows.
- Only 1 other surface link to /portal/iul-vs-roth. Add it where a reader would need it next (a related page's footer, the relevant dossier, the planner).
- Place /portal/iul-vs-roth on the sphere in shared/sphere.ts.
- Calls trpc.iulVsRoth (server/iulVsRoth.ts) but that router fetches no external data source. Wire a sourced series (FRED, BLS, FHFA, Zillow) into it, or state on the page that the figures are static.
- No FigureTrace in shared/provenance.ts covers /portal/iul-vs-roth. Add one so a client can see how its headline figure is made.

Connections that would take it to ten — by judgement:

- Erosion: tax odds should drive the comparison.
- Genome: already linked.

Real Estate Mogul — /portal/real-estate-mogul

Wiring 4.5/10 · Value 8/10 · Frequency 3/10

Right page when: Intending to own more than three doors.

To reach ten — from the code:

- Name the engine in `shared/calculatorCatalog.ts` (engine: "shared/....ts") so provenance and the brain can cite it.
- No `server/*.test.ts` imports `shared/ibbotsonModel.ts`. Add one that reproduces a figure the page shows.
- Only 1 other surface link to `/portal/real-estate-mogul`. Add it where a reader would need it next (a related page's footer, the relevant dossier, the planner).
- Place `/portal/real-estate-mogul` on the sphere in `shared/sphere.ts`.
- Calls `trpc.marketData` (`server/marketData.ts`) but that router fetches no external data source. Wire a sourced series (FRED, BLS, FHFA, Zillow) into it, or state on the page that the figures are static.
- No `FigureTrace` in `shared/provenance.ts` covers `/portal/real-estate-mogul`. Add one so a client can see how its headline figure is made.

Connections that would take it to ten — by judgement:

- Planner: this IS a sequence; route the mogul model through it.
- Provenance: trace the equity line.

Policy Loan Modeller — </portal/policy-loans>

Wiring 3.5/10 · Value 7/10 · Frequency 2/10

Right page when: Cash value over \$50k and a use for it.

To reach ten — from the code:

- Name the engine in `shared/calculatorCatalog.ts` (engine: "shared/....ts") so provenance and the brain can cite it.
- No `server/*.test.ts` imports `shared/ibbotsonModel.ts`. Add one that reproduces a figure the page shows.
- No strategy in `shared/genomeStrategies.ts` names `/portal/policy-loans` in `relatedPaths` — the predictive layer cannot route a household here.
- Only 0 other surfaces link to `/portal/policy-loans`. Add it where a reader would need it next (a related page's footer, the relevant dossier, the planner).
- Place `/portal/policy-loans` on the sphere in `shared/sphere.ts`.
- Calls `trpc.policyLoanOptimizer` (`server/policyLoanOptimizer.ts`) but that router fetches no external data source. Wire a sourced series (FRED, BLS, FHFA, Zillow) into it, or state on the page that the figures are static.
- No `FigureTrace` in `shared/provenance.ts` covers `/portal/policy-loans`. Add one so a client can see how its headline figure is made.

Connections that would take it to ten — by judgement:

- Mechanism: link to `/portal/mechanism/policy-loan` both ways.
- Thresholds: use `policy-loan-value` and the `wash-loan` variant.
- Planner: the `policy:borrow` stage should open this page.

Tax-Free Income for Life — </portal/income-for-life>

Wiring 6/10 · Value 9/10 · Frequency 5/10

Right page when: Within ten years of retirement, or any age with a Roth conversion decision pending.

To reach ten — from the code:

- `client/src/pages/portal/IncomeForLife.tsx` imports no shared engine — the page's figures are not reproducible outside it. Move the arithmetic to `shared/` and import it.
- No strategy in `shared/genomeStrategies.ts` names `/portal/income-for-life` in `relatedPaths` — the predictive layer cannot route a household here.

- Only 0 other surfaces link to `/portal/income-for-life`. Add it where a reader would need it next (a related page's footer, the relevant dossier, the planner).
- No FigureTrace in `shared/provenance.ts` covers `/portal/income-for-life`. Add one so a client can see how its headline figure is made.

Connections that would take it to ten — by judgement:

- Planner: `policy:borrow` stage should cite this page's rate sheet.
- Genome: already linked; add the longevity factor as a gate.
- Live: SSA period life table refresh.

Long-Term Care Planner — </portal/long-term-care>

Wiring 6/10 · Value 9/10 · Frequency 6/10

Right page when: Fifty-five and older, or caring for a parent.

To reach ten — from the code:

- `client/src/pages/portal/LongTermCare.tsx` imports no shared engine — the page's figures are not reproducible outside it. Move the arithmetic to `shared/` and import it.
- No strategy in `shared/genomeStrategies.ts` names `/portal/long-term-care` in `relatedPaths` — the predictive layer cannot route a household here.
- Only 0 other surfaces link to `/portal/long-term-care`. Add it where a reader would need it next (a related page's footer, the relevant dossier, the planner).
- No FigureTrace in `shared/provenance.ts` covers `/portal/long-term-care`. Add one so a client can see how its headline figure is made.

Connections that would take it to ten — by judgement:

- Longevity engine: joint survival odds.
- Zip: cost by zip is there; expose on the household page.
- Genome: link from the protection strategies.

The Wealth Genome — </portal/wealth-genome>

Wiring 6/10 · Value 9/10 · Frequency 8/10

Right page when: Everyone, once, before any strategy page.

To reach ten — from the code:

- `client/src/pages/WealthGenomePage.tsx` imports no shared engine — the page's figures are not reproducible outside it. Move the arithmetic to `shared/` and import it.
- Only 0 other surfaces link to `/portal/wealth-genome`. Add it where a reader would need it next (a related page's footer, the relevant dossier, the planner).
- Calls `trpc.factFinder` (`server/factFinderRouter.ts`) but that router fetches no external data source. Wire a sourced series (FRED, BLS, FHFA, Zillow) into it, or state on the page that the figures are static.
- No FigureTrace in `shared/provenance.ts` covers `/portal/wealth-genome`. Add one so a client can see how its headline figure is made.

Connections that would take it to ten — by judgement:

- Already the predictive hub; add the household pairing prompt on completion.

IUL Engine — </portal/iul-engine>

Wiring 5/10 · Value 8/10 · Frequency 4/10

Right page when: Overfunding capacity for ten years and an accumulation goal beyond qualified plans.

To reach ten — from the code:

- client/src/pages/portal/iulEngine.tsx imports no shared engine — the page's figures are not reproducible outside it. Move the arithmetic to shared/ and import it.
- No strategy in shared/genomeStrategies.ts names /portal/iul-engine in relatedPaths — the predictive layer cannot route a household here.
- Only 1 other surface link to /portal/iul-engine. Add it where a reader would need it next (a related page's footer, the relevant dossier, the planner).
- Calls trpc.iulLinks (server/iulLinksRouter.ts) but that router fetches no external data source. Wire a sourced series (FRED, BLS, FHFA, Zillow) into it, or state on the page that the figures are static.
- No FigureTrace in shared/provenance.ts covers /portal/iul-engine. Add one so a client can see how its headline figure is made.

Connections that would take it to ten — by judgement:

- Time machine: link historical crediting both ways.
- Mechanism dossier: cross-link policy-loan.
- Live: carrier cap/participation sheets dated.

Policy Cost Lab — </portal/policy-cost-lab>

Wiring 5/10 · Value 8/10 · Frequency 3/10

Right page when: Holding or considering a permanent policy and wanting the cost decomposed.

To reach ten — from the code:

- client/src/pages/portal/PolicyCostLab.tsx imports no shared engine — the page's figures are not reproducible outside it. Move the arithmetic to shared/ and import it.
- No strategy in shared/genomeStrategies.ts names /portal/policy-cost-lab in relatedPaths — the predictive layer cannot route a household here.
- Only 0 other surfaces link to /portal/policy-cost-lab. Add it where a reader would need it next (a related page's footer, the relevant dossier, the planner).
- Calls trpc.policyLab (server/policyLabRouter.ts) but that router fetches no external data source. Wire a sourced series (FRED, BLS, FHFA, Zillow) into it, or state on the page that the figures are static.
- No FigureTrace in shared/provenance.ts covers /portal/policy-cost-lab. Add one so a client can see how its headline figure is made.

Connections that would take it to ten — by judgement:

- Provenance: trace the cost-of-insurance line.
- Carrier registry: pull the product's charges from a dated source.

Index Strategy Comparison — </portal/index-strategies>

Wiring 4/10 · Value 7/10 · Frequency 3/10

Right page when: Choosing a crediting method on an indexed product.

To reach ten — from the code:

- client/src/pages/portal/IndexStrategyComparison.tsx imports no shared engine — the page's figures are not reproducible outside it. Move the arithmetic to shared/ and import it.
- Add shared/balancedIndexedAccount.ts to a group in shared/aiMemoryBank.ts so the twelve channels can use it.
- No strategy in shared/genomeStrategies.ts names /portal/index-strategies in relatedPaths — the predictive layer cannot route a household here.
- Only 0 other surfaces link to /portal/index-strategies. Add it where a reader would need it next (a related page's footer, the relevant dossier, the planner).

- Place `/portal/index-strategies` on the sphere in `shared/sphere.ts`.
- Calls `trpc.marketData` (`server/marketData.ts`) but that router fetches no external data source. Wire a sourced series (FRED, BLS, FHFA, Zillow) into it, or state on the page that the figures are static.

Connections that would take it to ten — by judgement:

- Already traced in provenance; add a genome link.

QBI / Section 199A Optimizer — </portal/qbi-optimizer>

Wiring 6.5/10 · Value 9/10 · Frequency 4/10

Right page when: Any pass-through business owner, especially specified-service trades near the phase-out.

To reach ten — from the code:

- No strategy in `shared/genomeStrategies.ts` names `/portal/qbi-optimizer` in `relatedPaths` — the predictive layer cannot route a household here.
- Only 0 other surfaces link to `/portal/qbi-optimizer`. Add it where a reader would need it next (a related page's footer, the relevant dossier, the planner).
- Place `/portal/qbi-optimizer` on the sphere in `shared/sphere.ts`.
- No `tRPC` call from `client/src/pages/portal/QbiOptimizer.tsx` — every figure is client-side and cannot be refreshed from a source. Add a router under `server/` that supplies dated inputs.

Connections that would take it to ten — by judgement:

- Genome: link from the business-owner strategies.
- Live: annual inflation adjustment of the threshold.

Wealth Genome Pairing Protocol — </portal/household-genome>

Wiring 5.5/10 · Value 8/10 · Frequency 5/10

Right page when: Any couple with shared assets.

To reach ten — from the code:

- No strategy in `shared/genomeStrategies.ts` names `/portal/household-genome` in `relatedPaths` — the predictive layer cannot route a household here.
- Only 1 other surface link to `/portal/household-genome`. Add it where a reader would need it next (a related page's footer, the relevant dossier, the planner).
- Place `/portal/household-genome` on the sphere in `shared/sphere.ts`.
- No `tRPC` call from `client/src/pages/portal/HouseholdGenome.tsx` — every figure is client-side and cannot be refreshed from a source. Add a router under `server/` that supplies dated inputs.
- No `FigureTrace` in `shared/provenance.ts` covers `/portal/household-genome`. Add one so a client can see how its headline figure is made.

Connections that would take it to ten — by judgement:

- Planner: the primary-residence moves should show the veto weight.
- Consent: already gated; expose the record.

Infinite Banking — </portal/infinite-banking>

Wiring 5.5/10 · Value 8/10 · Frequency 3/10

Right page when: Anyone who has heard the phrase and wants the arithmetic.

To reach ten — from the code:

- No strategy in `shared/genomeStrategies.ts` names `/portal/infinite-banking` in `relatedPaths` — the predictive layer cannot route a household here.

- Only 1 other surface link to `/portal/infinite-banking`. Add it where a reader would need it next (a related page's footer, the relevant dossier, the planner).
- Place `/portal/infinite-banking` on the sphere in `shared/sphere.ts`.
- No tRPC call from `client/src/pages/portal/InfiniteBanking.tsx` — every figure is client-side and cannot be refreshed from a source. Add a router under `server/` that supplies dated inputs.
- No FigureTrace in `shared/provenance.ts` covers `/portal/infinite-banking`. Add one so a client can see how its headline figure is made.

Connections that would take it to ten — by judgement:

- Planner: link both ways.
- Thresholds: link the policy thresholds.

The Thresholds — </portal/thresholds>

Wiring 5.5/10 · Value 8/10 · Frequency 3/10

Right page when: Before signing anything with a lender or provider.

To reach ten — from the code:

- No strategy in `shared/genomeStrategies.ts` names `/portal/thresholds` in `relatedPaths` — the predictive layer cannot route a household here.
- Only 1 other surface link to `/portal/thresholds`. Add it where a reader would need it next (a related page's footer, the relevant dossier, the planner).
- Place `/portal/thresholds` on the sphere in `shared/sphere.ts`.
- No tRPC call from `client/src/pages/portal/Thresholds.tsx` — every figure is client-side and cannot be refreshed from a source. Add a router under `server/` that supplies dated inputs.
- No FigureTrace in `shared/provenance.ts` covers `/portal/thresholds`. Add one so a client can see how its headline figure is made.

Connections that would take it to ten — by judgement:

- Lender directory: each variant's `providedBy` should link a verified record.
- Freshness: 90-day re-verification sweep with a flag.

MYGA Fixed Rates — </portal/myga-fixed-rate>

Wiring 4.5/10 · Value 7/10 · Frequency 5/10

Right page when: A CD alternative decision, any age.

To reach ten — from the code:

- Name the engine in `shared/calculatorCatalog.ts` (engine: `"shared/....ts"`) so provenance and the brain can cite it.
- No strategy in `shared/genomeStrategies.ts` names `/portal/myga-fixed-rate` in `relatedPaths` — the predictive layer cannot route a household here.
- Only 0 other surfaces link to `/portal/myga-fixed-rate`. Add it where a reader would need it next (a related page's footer, the relevant dossier, the planner).
- Place `/portal/myga-fixed-rate` on the sphere in `shared/sphere.ts`.
- No tRPC call from `client/src/pages/portal/MYGAFixedRate.tsx` — every figure is client-side and cannot be refreshed from a source. Add a router under `server/` that supplies dated inputs.
- No FigureTrace in `shared/provenance.ts` covers `/portal/myga-fixed-rate`. Add one so a client can see how its headline figure is made.

Connections that would take it to ten — by judgement:

- Live: rates dated.
- Tested: `mygaWaterfall.ts` has no test.

The Erosion Engine — </portal/erosion>

Wiring 7/10 · Value 9/10 · Frequency 7/10

Right page when: Anyone with a tax-deferred balance and a horizon; the argument behind half the site.

To reach ten — from the code:

- client/src/pages/portal/Erosion.tsx imports no shared engine — the page's figures are not reproducible outside it. Move the arithmetic to shared/ and import it.
- Only 1 other surface link to /portal/erosion. Add it where a reader would need it next (a related page's footer, the relevant dossier, the planner).
- No FigureTrace in shared/provenance.ts covers /portal/erosion. Add one so a client can see how its headline figure is made.

Connections that would take it to ten — by judgement:

- Already the hub; add inbound links from every tax page's footer.

Roth Conversion Ladder — </portal/roth-conversion>

Wiring 7/10 · Value 9/10 · Frequency 6/10

Right page when: Pre-tax balance over \$200k and a horizon past the conversion year.

To reach ten — from the code:

- Name the engine in shared/calculatorCatalog.ts (engine: "shared/...ts") so provenance and the brain can cite it.
- Calls trpc.clients (server/clients.ts) but that router fetches no external data source. Wire a sourced series (FRED, BLS, FHFA, Zillow) into it, or state on the page that the figures are static.
- No FigureTrace in shared/provenance.ts covers /portal/roth-conversion. Add one so a client can see how its headline figure is made.

Connections that would take it to ten — by judgement:

- Erosion: the power-adjusted tax odds should be the conversion's headline assumption.
- Planner: a conversion is a stage; expose it as a move.
- Provenance: trace the break-even year.

Tax Waterfall — </portal/tax-waterfall>

Wiring 6/10 · Value 8/10 · Frequency 8/10

Right page when: Any tax-paying household; the first tax page to read.

To reach ten — from the code:

- No strategy in shared/genomeStrategies.ts names /portal/tax-waterfall in relatedPaths — the predictive layer cannot route a household here.
- Only 0 other surfaces link to /portal/tax-waterfall. Add it where a reader would need it next (a related page's footer, the relevant dossier, the planner).
- Calls trpc.taxBracketWaterfall (server/taxBracketWaterfall.ts) but that router fetches no external data source. Wire a sourced series (FRED, BLS, FHFA, Zillow) into it, or state on the page that the figures are static.
- No FigureTrace in shared/provenance.ts covers /portal/tax-waterfall. Add one so a client can see how its headline figure is made.

Connections that would take it to ten — by judgement:

- Provenance: trace one bracket figure.
- Genome: link from the tax strategies.

Fixed Indexed Annuity Top Ten — </portal/fia-top10>

Wiring 5/10 · Value 7/10 · Frequency 4/10

Right page when: Conservative appetite with a lump to place.

To reach ten — from the code:

- Name the engine in `shared/calculatorCatalog.ts` (engine: "shared/....ts") so provenance and the brain can cite it.
- No strategy in `shared/genomeStrategies.ts` names `/portal/fia-top10` in `relatedPaths` — the predictive layer cannot route a household here.
- Only 0 other surfaces link to `/portal/fia-top10`. Add it where a reader would need it next (a related page's footer, the relevant dossier, the planner).
- Calls `trpc.marketData` (`server/marketData.ts`) but that router fetches no external data source. Wire a sourced series (FRED, BLS, FHFA, Zillow) into it, or state on the page that the figures are static.
- No `FigureTrace` in `shared/provenance.ts` covers `/portal/fia-top10`. Add one so a client can see how its headline figure is made.

Connections that would take it to ten — by judgement:

- Live: rate sheets dated; the ten move monthly.
- Genome: link from the guaranteed-growth strategies.

Household Wealth — `/portal/household-wealth`

Wiring 5/10 · Value 7/10 · Frequency 6/10

Right page when: Any household wanting the whole balance sheet on one page.

To reach ten — from the code:

- Name the engine in `shared/calculatorCatalog.ts` (engine: "shared/....ts") so provenance and the brain can cite it.
- No strategy in `shared/genomeStrategies.ts` names `/portal/household-wealth` in `relatedPaths` — the predictive layer cannot route a household here.
- Only 0 other surfaces link to `/portal/household-wealth`. Add it where a reader would need it next (a related page's footer, the relevant dossier, the planner).
- Calls `trpc.clients` (`server/clients.ts`) but that router fetches no external data source. Wire a sourced series (FRED, BLS, FHFA, Zillow) into it, or state on the page that the figures are static.
- No `FigureTrace` in `shared/provenance.ts` covers `/portal/household-wealth`. Add one so a client can see how its headline figure is made.

Connections that would take it to ten — by judgement:

- Household genome: pair the spouses here.
- Test: `householdWealth.ts` has none.

Alternative Lines of Credit for Rental Properties — `/portal/alt-credit`

Wiring 6.5/10 · Value 8/10 · Frequency 3/10

Right page when: Rental owner declined by, or done with, conventional lenders.

To reach ten — from the code:

- Only 1 other surface link to `/portal/alt-credit`. Add it where a reader would need it next (a related page's footer, the relevant dossier, the planner).
- Place `/portal/alt-credit` on the sphere in `shared/sphere.ts`.
- No `tRPC` call from `client/src/pages/portal/AltCreditHub.tsx` — every figure is client-side and cannot be refreshed from a source. Add a router under `server/` that supplies dated inputs.
- No `FigureTrace` in `shared/provenance.ts` covers `/portal/alt-credit`. Add one so a client can see how its headline figure is made.

Connections that would take it to ten — by judgement:

- Providers: the 39 dossier records should link into the directory.
- Thresholds: each lender's seasoning/LTV should appear on its record.

How a Figure Gets Made — </portal/how-a-figure-is-made>

Wiring 6.5/10 · Value 8/10 · Frequency 4/10

Right page when: Any client or advisor who wants to check a number.

To reach ten — from the code:

- Only 0 other surfaces link to </portal/how-a-figure-is-made>. Add it where a reader would need it next (a related page's footer, the relevant dossier, the planner).
- Place </portal/how-a-figure-is-made> on the sphere in `shared/sphere.ts`.
- No `tRPC` call from `client/src/pages/portal/HowAFigureIsMade.tsx` — every figure is client-side and cannot be refreshed from a source. Add a router under `server/` that supplies dated inputs.
- No `FigureTrace` in `shared/provenance.ts` covers </portal/how-a-figure-is-made>. Add one so a client can see how its headline figure is made.

Connections that would take it to ten — by judgement:

- Three traces exist; every featured page should have one.

Lifetime Guaranteed Income — </portal/lifetime-income>

Wiring 6.5/10 · Value 8/10 · Frequency 5/10

Right page when: Guaranteed-income appetite above 6 on the genome, or a spouse with it.

To reach ten — from the code:

- Only 0 other surfaces link to </portal/lifetime-income>. Add it where a reader would need it next (a related page's footer, the relevant dossier, the planner).
- Place </portal/lifetime-income> on the sphere in `shared/sphere.ts`.
- Calls `trpc.lifetimeIncome` (`server/lifetimeIncome.ts`) but that router fetches no external data source. Wire a sourced series (FRED, BLS, FHFA, Zillow) into it, or state on the page that the figures are static.
- No `FigureTrace` in `shared/provenance.ts` covers </portal/lifetime-income>. Add one so a client can see how its headline figure is made.

Connections that would take it to ten — by judgement:

- Live: carrier payout-rate sheets on a dated sweep.
- Household genome: pair the two spouses' income-floor factors here.

The Five Mechanisms — </portal/mechanisms>

Wiring 6.5/10 · Value 8/10 · Frequency 5/10

Right page when: Any household choosing among capital mechanisms.

To reach ten — from the code:

- No strategy in `shared/genomeStrategies.ts` names </portal/mechanisms> in `relatedPaths` — the predictive layer cannot route a household here.
- Place </portal/mechanisms> on the sphere in `shared/sphere.ts`.
- No `tRPC` call from `client/src/pages/portal/Mechanisms.tsx` — every figure is client-side and cannot be refreshed from a source. Add a router under `server/` that supplies dated inputs.
- No `FigureTrace` in `shared/provenance.ts` covers </portal/mechanisms>. Add one so a client can see how its headline figure is made.

Connections that would take it to ten — by judgement:

- Genome: strategy-fit should rank the five by the household's factors.
- Sphere: place it.

Liquidity Without the Bank — </portal/liquidity-routes>

Wiring 5.5/10 · Value 7/10 · Frequency 3/10

Right page when: Needing capital without a bank underwriting event.

To reach ten — from the code:

- No strategy in shared/genomeStrategies.ts names </portal/liquidity-routes> in relatedPaths — the predictive layer cannot route a household here.
- Only 1 other surface link to </portal/liquidity-routes>. Add it where a reader would need it next (a related page's footer, the relevant dossier, the planner).
- Place </portal/liquidity-routes> on the sphere in shared/sphere.ts.
- No tRPC call from client/src/pages/portal/LiquidityRoutes.tsx — every figure is client-side and cannot be refreshed from a source. Add a router under server/ that supplies dated inputs.
- No FigureTrace in shared/provenance.ts covers </portal/liquidity-routes>. Add one so a client can see how its headline figure is made.

Connections that would take it to ten — by judgement:

- Alt-credit: merge or cross-link; they overlap.
- Genome: link from the liquidity factor.

Retirement Income Projection — </portal/retirement-projection>

Wiring 5.5/10 · Value 7/10 · Frequency 8/10

Right page when: Everyone; it is the first page most households should see.

To reach ten — from the code:

- No strategy in shared/genomeStrategies.ts names </portal/retirement-projection> in relatedPaths — the predictive layer cannot route a household here.
- Only 0 other surfaces link to </portal/retirement-projection>. Add it where a reader would need it next (a related page's footer, the relevant dossier, the planner).
- Place </portal/retirement-projection> on the sphere in shared/sphere.ts.
- Calls trpc.clientPortal (server/clientPortal.ts) but that router fetches no external data source. Wire a sourced series (FRED, BLS, FHFA, Zillow) into it, or state on the page that the figures are static.
- No FigureTrace in shared/provenance.ts covers </portal/retirement-projection>. Add one so a client can see how its headline figure is made.

Connections that would take it to ten — by judgement:

- Engine: retirementDNA.ts is named but the page imports policyMechanics — reconcile.
- Brain: add retirementDNA.ts to a memory group.
- Test: none imports retirementDNA.

The Zip Engine — </portal/zip-engine>

Wiring 8/10 · Value 9/10 · Frequency 5/10

Right page when: Any property decision in a named zip.

To reach ten — from the code:

- No strategy in shared/genomeStrategies.ts names /portal/zip-engine in relatedPaths — the predictive layer cannot route a household here.
- No FigureTrace in shared/provenance.ts covers /portal/zip-engine. Add one so a client can see how its headline figure is made.

Connections that would take it to ten — by judgement:

- Genome: link from the property strategies.
- Planner: appreciation input should default from the zip series.

Mortgage Killer — /portal/mortgage-killer

Wiring 7.5/10 · Value 8/10 · Frequency 7/10

Right page when: Any mortgage and any surplus.

To reach ten — from the code:

- Place /portal/mortgage-killer on the sphere in shared/sphere.ts.
- Calls trpc.clients (server/clients.ts) but that router fetches no external data source. Wire a sourced series (FRED, BLS, FHFA, Zillow) into it, or state on the page that the figures are static.
- No FigureTrace in shared/provenance.ts covers /portal/mortgage-killer. Add one so a client can see how its headline figure is made.

Connections that would take it to ten — by judgement:

- Mechanism: cross-link velocity-heloc dossier.
- Thresholds: heloc-cltv and the interest-calculation variant.
- Test: mortgageKiller.ts has none — the highest-traffic untested engine.

The Mortgage Ledger — /portal/mortgage-ledger

Wiring 8.5/10 · Value 8/10 · Frequency 6/10

Right page when: Any mortgage the household wants to see by the dollar.

To reach ten — from the code:

- Place /portal/mortgage-ledger on the sphere in shared/sphere.ts.
- Calls trpc.mortgageKiller (server/mortgageKiller.ts) but that router fetches no external data source. Wire a sourced series (FRED, BLS, FHFA, Zillow) into it, or state on the page that the figures are static.

Connections that would take it to ten — by judgement:

- Planner: velocity stages should cite the ledger's interest line.

Rental Enterprise — /portal/rental-enterprise

Wiring 9/10 · Value 8/10 · Frequency 3/10

Right page when: Five or more rentals, or the plan to get there.

To reach ten — from the code:

- No FigureTrace in shared/provenance.ts covers /portal/rental-enterprise. Add one so a client can see how its headline figure is made.

Connections that would take it to ten — by judgement:

- Planner: the blanket-refinance stage should hand the pool across.
- Thresholds: partial-release clause surfaced here.

Short-Term Rentals — /portal/short-term-rentals

Wiring 8/10 · Value 7/10 · Frequency 3/10

Right page when: Considering nightly rental in a specific market.

To reach ten — from the code:

- Only 1 other surface link to `/portal/short-term-rentals`. Add it where a reader would need it next (a related page's footer, the relevant dossier, the planner).
- No FigureTrace in `shared/provenance.ts` covers `/portal/short-term-rentals`. Add one so a client can see how its headline figure is made.

Connections that would take it to ten — by judgement:

- STR tax page: link both ways.
- Genome: link.
